

# RAPIER

The unit shown carries many role specific features 200V, 400Hz Rapier electronic controls, optional cable reel carriers & stowage trunk.

The DG 18-30 is a highly developed and test-proven 18kVA 3000 rpm liquid cooled Diesel, super silenced mobile generator set.

Designed for ease of operation, and maintenance, the machine has proved itself both durable and reliable with now many hundreds of operating hours recorded on operational service in high ambient temperatures and desert deployments with no recorded problems to date.

Originally developed in collaboration with a major OK supplier of defence equipment and first-hand input from the customer ( a middle east Air force). The unit was specifically designed to power legacy Rapier SAM systems, but can easily be adapted to provide more "conventional" power requirements.

The trailer is a bespoke design intended for use with Land Rover / Land Cruiser type vehicles in desert conditions and is equipped with a 76mm NATO hitch and lighting equipment including convoy light.

The fully loaded trailer has been tested both on and off-road and proved to be stable at speeds of up to 60mph (100kph) in all conditions.
